0.0 Preface

Welcome to **Open Societyware**, the open-source, multifeatured, modular society system for everyone.

The aim of this project is to provide University Societies, Clubs, and other activity groups a place to manage an online presence. This includes features such as keeping track of members, and their roles within the society, use of a website, blog, voting system, and maybe more in the future...

Open Societyware is an open-source project, if the name wasn't enough of an indication. This means you are free to use the software as you like, within the constraints of the CC SA 4.0 license. I am excited to see what things people get up to, and hope that this little bit of software can help people out there.

1.0 Design Philosophy

Open Societyware is designed in such a way that enables additional functionality to be simple to add.
